Team Assessment 1 - Final Project

- My contributions to this final project were firstly to be the head of communications. I was in charge of making sure communication between my team, our client, and our teacher was all clear and timely. Additionally, I have begun researching how to code this project and what type of components we need to order.
- During this project, Marshall researched the different solutions for our problem that already exist. Bella searched Amazon and created a BOM so we can add the necessary components to our Purchasing Request Form. Jerred researched what type of speaker is compatible with an Arduino and how to connect it to our Arduino Uno so we can be prepared for our prototyping phase.
- During this project, we as a team encountered issues that were our fault. We were on top of our deadlines, creative with our problem solving, realistic with logic and feasibility of a solution, and we were available and made time to accommodate our client. Unfortunately, we did have some issues with reaching our client which really slowed down our progress and the true scope of our project. Despite these issues, I feel like my team operated well and we are prepared for the upcoming obstacles during the rest of the project.
